### **DETAILED ACTION**

This Office Action in a Non-Final Reaction in response to the amendment filed on February 24, 2004.

#### ***Priority***

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

#### ***Drawings***

2. Figures 6A, 6B, 7, and 8 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). Corrected drawings in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

3. The drawings are objected to as failing to comply with 37 CFR 1.84(p)(5) because they include the following reference character(s) not mentioned in the description: "3" in Figure 6B.

Art Unit: 2875

4. Corrected drawing sheets in compliance with 37 CFR 1.121(d), or amendment to the specification to add the reference character(s) in the description in compliance with 37 CFR 1.121(b) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

***Claim Rejections - 35 USC § 102***

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

6. Claims 1-5 are rejected under 35 U.S.C. 102(a) as being anticipated by **Kunimochi et al. (2003/0117792)**.

7. In reference to Claim 1, **Kunimochi et al.** shows a spread illuminating apparatus [Figure 11: (1)] comprising:

- At least one light source [Figure 11: (5)];

Art Unit: 2875

- A light conductive plate [Figure 11: (2)] which has the at least one light source [Figure 11: (5)] disposed so as to face toward one end surface thereof, and which allows light emitted from the at least one light source [Figure 11: (5)] and introduced therein to exit out from at least one of two major surfaces [Figure 11: (16)] thereof respectively toward at least one object to be illuminated [Figure 11: (L)];
  - And a light converging means [Figure 11: (12)] which has a refractive index profile in a direction orthogonal to the two major surfaces of the light conductive plate [Figure 11: (15 and 16)], and which is disposed between the at least one light source [Figure 11: (5)] and the one end surface of the light conductive plate [Figure 11: (2)].
8. In reference to Claim 2, **Kunimochi et al.** shows:
- The refractive index profile of the light converging means [Figure 11: (12)] is structured symmetric about a center plane of the light converging means [Figure 11: (12)] such that a refractive index decreases with and increase in distance from the center plane [See page 1 paragraph [0011]].
9. In reference to Claim 3, **Kunimochi et al.** shows:
- The light converging means [Figure 11: (12)] has a height substantially equal to a thickness of the light conductive plate [Figure 11: (2)] toward the one end surface [See Figure 11].

10. In reference to Claim 4, **Kunimochi et al.** shows:
- The light converging means [Figure 11: (12)] has its light entrance surface [Figure 11: (15)] and its light exit surface [Figure 11: (16)] oriented parallel to each other [See Figure 11].
11. In reference to Claim 5, **Kunimochi et al.** shows:
- The light converging means [Figure 11: (12)] has the light entrance surface [Figure 11: (15)] and the light exit surface [Figure 11: (16)] bonded respectively to the at least one light source [Figure 11: (5)] and the one end surface of the light conductive plate [Figure 11: (8)] by means of an adhesive which transmits the light emitted from the at least one light source [Figure 11: (5)].

### ***Allowable Subject Matter***

12. Claims 6-10 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
